Python Programming

Assignment Date	25 October 2022
Student Name	Venkatesh H
Student Roll Number	822119106025
Maximum Marks	2 Marks

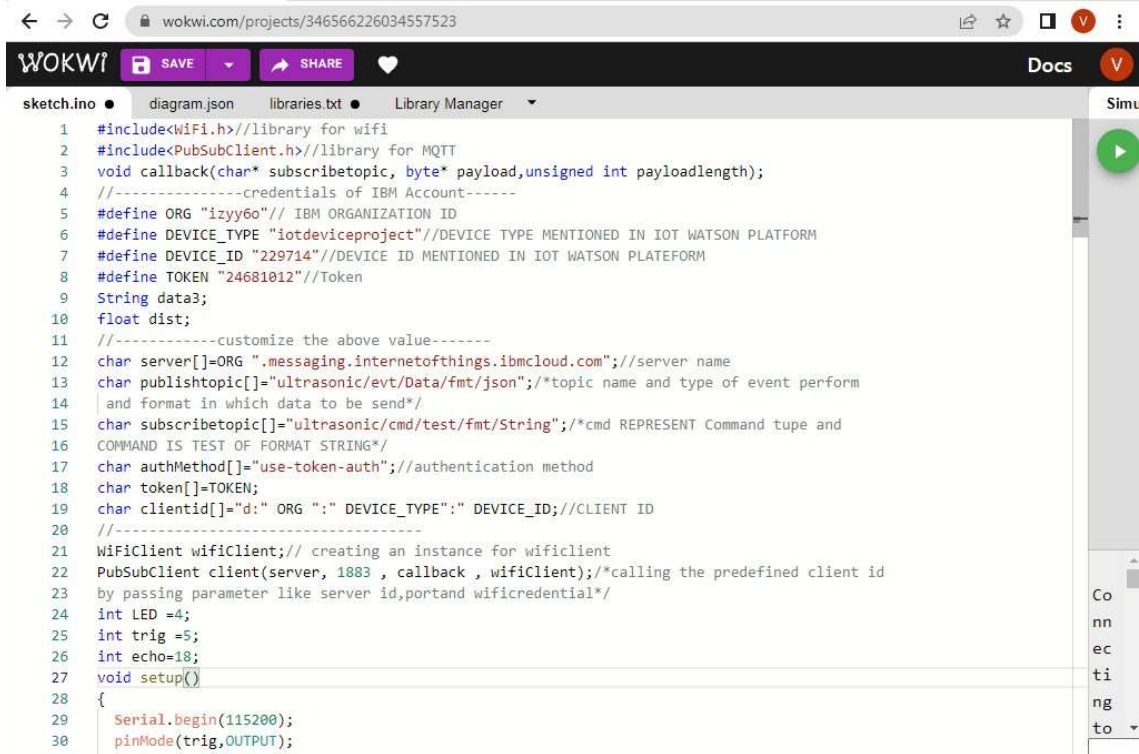

Question-1:

Write code and connections in wokwi for ultrasonic sensor.

Whenever distance is less than 100 cms send "alert" to ibm cloud and display in devicerecent events.

Upload document with wokwi share link and images of ibm cloud

Solution:

DATA SENT TO IBM CLOUD ON NO OBJECT DETECTED

The screenshot shows the IBM Cloud IoT Dashboard for a device named "DISTANCEDETECT". The device is in a "Disconnected" state. The "Recent Events" tab is selected, showing a list of events. The events are all of type "Data" and contain a JSON payload with "distance" and "object" fields. The "object" field is "No" for all events, indicating no object was detected. The "Last Received" column shows the time of each event, all within a few seconds of each other.

Event	Value	Format	Last Received
Data	{"distance":141.21,"object":"No"}	json	a few seconds ago
Data	{"distance":141.21,"object":"No"}	json	a few seconds ago

WHEN NO OBJECT DETECTED BY ULTRASONIC DETECTOR

The screenshot shows the Wokwi IDE interface. On the left, the "Library Manager" is open, showing the "sketch.ino" file. The code in the sketch.ino file is as follows:

```
1 #include<WiFi.h>//library for wifi
2 #include<PubSubClient.h>//library for MQ
3 void callback(char* subscribetopic, byte
4 //-----credentials of IBM Acco
5 #define ORG "izyy6o"// IBM ORGANIZATION
6 #define DEVICE_TYPE "iotdeviceproject"//
7 #define DEVICE_ID "229714"//DEVICE ID ME
8 #define TOKEN "24681012"//Token
9 String data3;
10 float dist;
11 //-----customize the above value-
12 char server[]=ORG ".messaging.internetof
13 char publishtopic[]="ultrasonic/evt/Data
14 and format in which data to be send*/
15 char subscribetopic[]="ultrasonic/cmd/te
16 COMMAND IS TEST OF FORMAT STRING*/
17 char authMethod[]="use-token-auth";//aut
18 char token[]=TOKEN;
19 char clientId[]="d:" ORG ":" DEVICE_TYPE
20 //-----
21 WiFiClient wifiClient;// creating an ins
22 PubSubClient client(server, 1883, callb
23 by passing parameter like server id,port
24 int LED =4;
25 int trig =5;
26 int echo=18;
27 void setup()
28 {
29   Serial.begin(115200);
```

On the right, the "Simulation" window shows a visual representation of the ESP32 and the ultrasonic sensor. The sensor is connected to the ESP32 via a red wire (VCC) and a green wire (GND). The sensor's output is connected to the ESP32's TX pin (blue wire) and RX pin (green wire). The simulation output shows the following messages:

```
no object found
Sending payload: {"distance":141.21,"object":"No"}
Publish ok
Distancein cm141.21
no object found
Sending payload: {"distance":141.21,"object":"No"}
Publish ok
```
